Introduction	13
A	
Risk analysis in the evaluation of the international investment opportunities	21
2	
The global context of risk's increasing role	23
2.1. Fundamentals of risk. Risk in the context of globalization. An introduction	23
2.2. Evolvement of the concept of risk. Risks in the context of a secular growth of debt securities markets.....	26
2.2.1. Disintermediation of bank-system lending	27
2.2.2. Securitized borrowing and lending	28
2.2.3. Financial market globalization	29
2.3. Opportunities and risks in the global investment framework	30
2.3.1. Opportunities	30
2.3.2. Factors affecting the investment and credit decisions	31
2.3.2.1. Changing features of global issuers	31
2.3.2.2. Impact of mark-to-market portfolio management	32
2.3.2.3. Contractual relationship with borrowers.....	32
2.3.3. Risks faced by the debt issuers	33
2.3.3.1. The diminishing role of "risk-free" public debt.....	33
2.3.3.2. Substantially decrease of the role of government "safety nets"	34
2.3.3.3. More risk in financial institutions	35
2.3.3.4. Credit cycle as an effect of a weaker financial system.....	35
2.3.3.5. Effect of proliferation of lower-quality issuers	37
2.3.3.6. Competitive risks in globalised markets	39
2.3.3.7. Risks of consolidation and complex corporate structures	41
2.3.3.8. Technological and environmental risks.....	42
2.3.3.9. Risks related to the regulatory and legal environments	44
2.3.3.10. Political risks	44

3

Systemic risk and access to credit	47
3.1. The concept of systemic risk.....	49
3.1.1. Definitions	49
3.1.2. Dangers posed by systemic risk	55
3.1.3. The systemic risk and interbanking relations.....	57
3.1.3.1. Reasons for regulating the bank capital.....	59
3.2. The historical evidence of the systemic risk	59
3.2.1. Potential exposure	60
3.2.2. Historical experience.....	61
3.2.3. The period before 1988.....	66
3.2.4. Basel I (BIS 1988) and Basel II Accords	67
3.3. Prevention of the systemic risk.....	69
3.4. Managing the systemic risk.....	70
3.4.1. The macroshock	71
3.4.2. Failure chains	73
3.4.3. Common shock and reassessment failures	74
3.5. Conclusions on systemic risk.....	75

4

Credit rating agencies	77
4.1. The role of the credit risk rating agencies	78
4.1.1. The activity of the rating agencies	78
4.1.2. Types of rating agencies.....	80
4.1.3. The rating process	80
4.2. Aspects of the activities of the international rating agencies.....	82
4.2.1. Users of the credit ratings.....	82
4.2.1.1. Bond issuers.....	82
4.2.1.2. Investors in fixed-income securities	83
4.2.1.3. Institutional investors	84
4.2.1.4. Equity investors	84
4.2.1.5. Broker-dealers and sell-side firms	85
4.2.1.6. Regulatory authorities	86
4.2.1.7. Private entities.....	86
4.2.2. Barriers at the entrance on the market	86
4.2.3. Ratings disclosure and publication.....	87
4.2.4. The methodology and transparency of the ratings.....	88
4.2.5. Conflicts of interest	88
4.2.5.1. Issuer fees	88
4.2.5.2. Access to non-public information. Insider trading.....	89
4.2.5.3. Ancillary advisory services	89
4.2.5.4. Financial interests in rated issuers.....	90

4.3. Critics brought to the rating agencies.....	90
4.4. The main credit rating agencies.....	92
4.4.1. Standard and Poor's (S&P).....	92
4.4.1.1. Long-term ratings.....	93
4.4.1.2. Short-term credit ratings.....	94
4.4.1.3. Stock market indices.....	95
4.4.1.4. Publications.....	95
4.4.1.5. Criticism.....	95
4.4.2. Fitch Ratings, Ltd.....	95
4.4.2.1. Long-term ratings.....	96
4.4.2.2. Short-term ratings.....	96
4.4.3. Moody's Corporation.....	97
4.4.3.1. Long-term ratings.....	97
4.4.3.2. Short-term taxable ratings.....	98
4.4.3.3. Short-term tax-exempt ratings.....	98
4.4.3.4. Individual bank rankings.....	98
4.4.3.5. Abusive business practices.....	99
4.5. Key regulatory aspects of the credit rating activity.....	99
4.5.1. The independence of the credit rating agencies and the conflicts of interest.....	99
4.5.2. Issuers and the public disclosure.....	100
4.5.3. The public dissemination of the ratings.....	101
4.5.4. Preferential access to the information.....	101
4.5.5. Challenges to the new entrants.....	102
4.5.6. Unsolicited ratings.....	103
B	
Advances in modelling and forecasting volatility for risk assessment purposes.....	105
5	
Risk assessment with forecasting volatility models.....	107
5.1. Summary of the problem.....	107
5.2. Importance of volatility forecasting.....	110
5.2.1. What is volatility.....	110
5.2.2. Why volatility forecasting is important.....	111
5.2.2.1. Generic applications of volatility forecasting.....	113
5.2.2.1.1. Applications in point forecasting.....	113
5.2.2.1.2. Applications in interval forecasting.....	114
5.2.2.1.3. Applications in probability forecasting including sign forecasting.....	114
5.2.2.1.4. Applications in density forecasting.....	115
5.2.2.2. Financial applications of volatility forecasting.....	115

5.2.2.2.1. Applications in risk management: Value-at-risk (VaR) and Expected Shortfall (ES)	115
5.2.2.2.2. Applications in covariance risk: Time-varying betas and conditional Sharpe ratios	117
5.2.2.2.3. Applications in asset allocation with time-varying covariances	118
5.2.2.2.4. Applications in option valuation with dynamic volatility.....	119
5.2.2.3. Volatility forecasting applications in fields outside finance.....	120
5.3. Benchmarking the volatility forecasting models	122
5.3.1. The main models of volatility	139
5.3.1.1. Historical models	139
5.3.1.1.1. Random walk	139
5.3.1.1.2. Historical averages.....	141
5.3.1.1.3. Moving average models.....	141
5.3.1.1.4. Exponential smoothing model.....	145
5.3.1.1.5. Exponentially Weighted Moving Average (EWMA) model	145
5.3.1.2. The group of conditional heteroskedastic models.....	145
5.3.1.2.1. ARMA models	145
5.3.1.2.2. General ARMA models.....	148
5.3.1.3. Autoregressive moving-average and conditional heteroskedastic models	148
5.3.1.3.1. From ARMA to ARCH model. What ARCH brings new	148
5.3.1.3.2. The ARCH model	151
5.3.1.3.3. Properties of the ARCH models	152
5.3.1.3.4. Building an ARCH model	154
5.3.1.3.4.1. Order determination.....	154
5.3.1.3.4.2. Estimation	155
5.3.1.3.4.3. Weaknesses of the ARCH models	156
5.3.1.3.5. From ARCH to GARCH model. What GARCH model brings new.....	157
5.3.1.3.6. The GARCH model.....	158
5.3.1.3.7. GARCH shortcomings	160
5.3.1.3.8. Extensions of the GARCH model.....	161
5.3.1.3.8.1. The Exponential GARCH (EGARCH) model	161
5.3.1.3.8.1.1. Forecasting using an EGARCH model.....	162
5.3.1.3.8.2. The Threshold GARCH (TARCH) model	162
5.3.1.3.8.3. The GARCH-M model	164
5.3.1.3.8.4. The Multiplicative GARCH (MGARCH) model.....	164
5.3.1.3.8.5. The Smooth Transition GARCH (STGARCH) model.....	164

5.3.1.3.8.6. The Conditional Heteroskedastic Autoregressive Moving-Average (CHARMA) model	164
5.3.1.3.8.7. The Random Coefficient Autoregressive (RCA) model.....	166
5.3.1.3.8.8. The Component GARCH (CGARCH) model	166
5.3.1.3.8.9. The Asymmetric GARCH (AGARCH) model	167
5.3.1.3.8.10. The Integrated GARCH (IGARCH) model	167
5.3.1.3.8.11. The Fractionally Integrated GARCH (FIGARCH) model.....	167
5.3.1.3.8.12. The Square Root GARCH (SQGARCH) model.....	169
5.3.1.3.8.13. The Glosten-Jagannathan-Runkle GARCH (GJR-GARCH) model.....	169
5.3.1.3.8.14. The Power ARCH (PARCH) model.....	171
5.3.1.3.8.15. The Asymmetric Power ARCH (APARCH) model.....	171
5.3.1.3.8.16. The Fractionally Integrated Asymmetric Power ARCH (FIAPARCH) model.....	171
5.3.1.3.8.17. The Stochastic Volatility model.....	172
5.4. The realized volatility	172
5.4.1. The univariate framework of the realized volatility. A discreet time pattern.....	179
5.4.2. Modelling the realized volatility in continuous time and without the microstructure noise	181
5.4.2.1. The general context	181
5.4.2.2. Modeling by various sampling schemes	182
5.4.2.3. The distribution of the realized variance	185
5.4.3. Microstructure noise modeling.....	186
5.5. Realized versions of the GARCH type models.....	188
5.5.1. The Realized GARCH model.....	188
5.5.2. The Realized Exponential GARCH (Realized EGARCH) model.....	189
5.5.3. The Realized Multiplicative GARCH (Realized MGARCH) (Realized log-GARCH) model.....	189
5.5.4. The Realized Threshold GARCH (Realized TGARCH) model	189
5.5.5. The Realized Smooth Transition GARCH (Realized STGARCH) model	189
5.5.6. The Realized Integrated GARCH (Realized IGARCH) model.....	190
5.5.7. The Realized Glosten-Jagannathan-Runkle GARCH (Realized GJR-GARCH) model.....	190
5.5.8. The Realized Power ARCH (Realized PARCH) model	190
5.6. The Realized Smooth Transition Autoregression (Realized STAR) model.....	190
5.7. Assessing the quality of the volatility forecasting techniques.....	192
5.8. Why PC-GARCH?	196
5.9. Principal Component Analysis (PCA): a brief introduction to the method	198
5.10. Methodology	201

5.11. Experimental study	202
5.11.1. Data setting	202
5.11.2. Data sample	203
5.11.3. Preparing data for the PCA.....	217
5.11.3.1. Solving for the orthogonality	218
5.11.3.2. Finding the matrix of Principal Components	220
5.12. PC-GARCH implementation – the algorithm.....	222
5.12.1. Step one: Estimating univariate GARCH models	223
5.12.2. Step two: Obtaining residuals from GARCH(1,1) and standardizing them.....	225
5.12.3. Step three: Principal Component Analysis of standardized residuals.....	236
5.12.4. Step four: Running GARCH(1,1) on the principal components	238
5.12.5. Step five: Obtaining the GARCH model of the stock returns	239
5.13. Conclusions on using PC-GARCH.....	242
Final remarks	247
Further research	249
Bibliography	251
Appendix.....	267
